

EAST HANOVER ENVIRONMENTAL COMMISSION
411 RIDGEDALE AVENUE
EAST HANOVER, NJ 07936

ANNUAL REPORT FOR 2012

The enabling legislation of the Environmental Commission requires the commission make an annual report to the governing body of the municipality (40:56 A-4).

The Environmental Commission engaged in numerous activities throughout 2012 that the Commission hopes improved the environment of East Hanover. The following is a brief summary of the highlights of 2012.

Membership (as of December 31, 2012):

Christopher Manak, Chairman	2014
George McDonald, Vice-Chairman	2013
Loriann Esposito	2014
Gary Lombardi	2014
Dino Cirelli	2013
Tom Scorsone,	2014
John McCann,	2015
Student Assoc. Member Christie Jacob	2012
Consultant Member Adnan Khan	2012

The East Hanover Environmental Commission (EHEC) will be entering the New Year with two vacancies, both alternate positions. Regular member Adnan Khan resigned as a regular member, effective January 31, 2012, but wanted to remain on the Commission. A new position was added to the bylaws (see below).

Activities:

Patriot's Path Hike – Mbrs. Cirelli, Lombardi, Chair Manak and Janet McMillan of the Morris County Park Commission attended a hike of Patriot's Path from Smith's Ditch to Lurker Park, on February 15th. An assessment of damage after storms, blow down removal, litter check was conducted, as well as relocating blazes around downed trees. The entire walk took about 2 hours.

Patriot's Path Spring Cleanup – Mbrs. Cirelli, Scorsone, Lombardi, Esposito, Vice Chair McDonald, Chair Manak, Meghan VanDyk (Daily Record Grassroots editor), two township residents, and six middle school girls volunteered three hours of their time cleaning up the path from Louis to Daniel Street on a cold rainy day, March 31st. We removed 17 bags or equivalent to approximately 100 cubic feet of litter. A Daily Record report and photographer covered the cleanup (see attached Grassroots and Daily Record).

Home Depot donated garbage bags, water and gloves. Dunkin Donuts on Ridgedale Ave donated coffee and donuts.

Patriot's Path Fall Cleanup – Members McCann, Scorsone, Cirelli and Chair Manak attended a cleanup on October 20th. The area from Daniel Street to Smith's Ditch was cleaned up. The area wasn't as bad as expected, from the aftermath of the Hurricane.

Bylaws Amendment – A new position, Consultant Member, was introduced on first reading, on February 8, 2012, to the Commission bylaws. The second and final reading was held on March 14, 2012. The bylaws amendment was adopted on March 14, 2012 (see attached).

PSE&G Power Lines – Chair Manak, with member Cirelli and Councilman Martorelli attended a public hearing regarding the Draft Environmental Impact Statement on January 26, 2012 at the Farmstead Golf and Country Club in Lafayette, NJ. On behalf of the Commission and the Township, Chair Manak submitted a detailed three-page letter opposing the Susquehanna-Roseland 500kV Transmission Line and supporting the NO BUILD alternative as the "NPS-preferred Alternative" (see attached). The letter was also printed in the Hanover Eagle (see attached).

Sustainable Land Use Planning Grant – Barbara Heskins Davis, of The Land Conservancy of New Jersey, assisted the Township, and the Commission in applying for and receiving, a \$5000 matching grant from ANJEC for an Update to the Environmental Resource Inventory (ERI) of the Township of East Hanover. The Township will have to contribute \$5000, and ANJEC will contribute the other \$5000. Several maps have been designed, updated, and edited. The draft ERI was presented to the planning board on December 11th. The EC suggested, at it's December 12th meeting to add additional maps and several streets to the maps in the draft ERI.

Hatfield Swamp Wildlife Preserve – The Township and The Land Conservancy of NJ both own the Hatfield Swamp. Four inspections are conducted every year. The last inspection conducted the end of August showed that signs installed by the Land Conservancy were cut down. It was suggested that at the next inspection that the Parsippany police department, as well as the NJ State Police, and Fish and Wildlife officers are notified and invited.

One Day One School – Members McDonald and Lombardi attended this event, held on October 13th. The Township also donated \$300 on behalf of the Commission. The Commission received a certificate of appreciation, at the Florham Park Borough Council Meeting on Tuesday, November 20th, for contributing time and money (see attached).

Site Plan Review:

76 Overlook Avenue – reviewed and commented on application for variance for a two family home. The Planning board denied the application.

34 DeForest Avenue – C&L Towing wanted an addition in the back of an existing building. The application was reviewed and we found no major environmental concerns. The application was approved.

453 River Road – Chandra & Sushila Butani – wanted minor subdivision with variances. There are a lot of wetlands on the property. This is a flag lot that also runs behind the homes on Fox Run Drive. A letter was composed and sent in with our environmental concerns, recommending denial of this application. This is still ongoing.

In Conclusion:

I would like to take this time to personally thank all those members who served on the Commission this past year especially our secretary, Rosemary Arellano, for all her work, George McDonald for his dual work on the Commission and liaison to the Planning Board, our Student Associate Member and Hanover Park High School Environmental Club liaisons, for their hard work with the Commission.

The Commission also thanks the Mayor, Township Council, Administrator, Health Inspector, and Department of Public Works for their ongoing support of the Commission.

Respectfully submitted,

A handwritten signature in black ink, appearing to read 'Christopher Manak', written over a horizontal line.

Volunteers clear the land, the bogs and the banks of the Whippany River

By Jamie Duffy

For FlorhamParkHanover This Week

Three Saturdays a year, members of the East Hanover Environmental Commission rise early and head down to clear out a boggy section of the Patriot's Path, a mile long, branch strewn trail nestled along the Whippany River.

March 31 was one of those Saturdays, and despite the rain and the damp, 15 volunteers participated. Environmental

Commissioner Chris Manak brought with him 32-gallon trash bags and work gloves donated by Home Depot. Coffee, hot chocolate and pastries were provided by the Dunkin' Donuts on Ridge-dale Avenue.

The cleanup ran from 9 a.m. to 1 p.m. And Manak said 17 bags or about 68 cubic feet of trash was collected.

At past cleanups — on sunny days, when up to 40 people volunteered — there have been as many

as 40 bags of trash collected.

"We were pulling everything out," said Manak, who keeps track of the bags of trash and piles of tires set out on the road for the Department of Public Works to pick up.

It's not exactly a treasure trove waiting for the volunteers, but the cleanups that started about four years ago have reduced the amount of debris that comes in from the river and the trash drivers pitch from the road, ignoring

the message there's no dumping in this environmentally sensitive area.

"It's unnecessary," said Tom Scorson who worked in tandem with Dino Cirelli, another EC commissioner, separating the recyclables from the trash.

"We found tires, bottles, garbage, a car seat, branches, tiles and a hammock," said Cirelli.

George McDonald and Gary Lombardi, two landscapers on the commission, brought their own equipment and lopped off

dangerous branches and made plans to bring in vehicles to get rid of some larger piles of trash — heaps of scrap metal and chunks of concrete.

"That's a new one," said McDonald, who lives on the other side of town next to the Passaic River, as he pointed to a big pile of lawn refuse and concrete block. Some of the tires, he said, came from the upheaval of Tropical Storm Irene in October.

Established in the 1970s, The Patriot's Path is

the signature hiking-only trail established by the Morris County Park Commission. Its varied terrain runs 60 miles east and west through Morris County. Some of it is paved; other pathways are crushed stone and gravel, cinder and even gravel beds from railroad lines.

The stretch in East Hanover adopted by the environmental commission follows the river between two bridges that

See TRAILS, Page 5

TRAILS

Continued from Page 1

meet at Troy Road and is a natural bed of weeds and earth. Adopting a trail means agreeing to clean up the designated area — usually a mile or two — three times a year and fill out reports indicating downed trees so the Parks Commission staff can remove them, said Janet McMillan, trails coordinator. Volunteers also prune, pick up litter and “blaze” trees, a term used for marking the trees with colored symbols along the trails to guide hikers and rescue teams.

Elizabeth West and Barbara Hullings have worked as a team at the cleanups for a long time and have taken on other commitments, too. West has spent years walking Troy Road and picking up trash as she goes along the mile-plus stretch. A local company has agreed to let her dump the trash at its location. She takes the rest home to recycle.

As for Hullings, Manak said: “She’s like a dream come true.” She personally adopted the part of Patriot’s Path adjacent to her backyard.

“What we do for our section she does herself

for all of Lurker Park. It goes through the woods,” Manak said and runs from Ridgedale Avenue to River Road.

Commissioner Loriann Esposito brought along several eighth-grade girls to help and see for themselves firsthand how dumping can compromise a natural area.

Student Nicole DeRogatis came away thinking: “There’s no reason to dump, and we should get in and help out our community.” Classmate Savannah D’Andrea found “that doing little things makes a big difference.”

McMillan, who started the Adopt-a-Trail program in 1995, said there is no financial commitment. There are 80 volunteer groups who have adopted trails in 18 county parks and in trail systems. All of the trails can be found at www.morrisparks.net.

To adopt a trail, volunteers are asked to attend the next workshop at 7 p.m. April 19 at the Haggerty Education Center in Morristown. Information: 973-326-7604 or jmcmillan@morrisparks.net.

From left, 13-year-old volunteers Carly Calderone, Nicole DeRogatis and Ashley French.

Grassroots

VOLUNTEERS NEEDED

Give back to the trails you love to hike

By Meghan Van Dyk
Staff Writer

Janet McMillan has been busy blazing new trails in Morris County parks.

This week, she finished posting diamond-shaped trail markers on the missing and final stretch of the 16-mile Columbia Trail in Long Valley and led a team who blazed five new colored trails in Tourne County Park, which spans Boonton, Denville and Mountain Lakes. And soon, she'll post new signs in Mount Hope Historical Park in Rockaway.

"It's been amazing to see how the trail system in Morris County has grown since I joined the Park Commission in 1995," said McMillan, trails coordinator. "It has tripled in size. The trails are a facility unto themselves, and hiking has become an activity, a real passion, around here."

The new trails are good news for all Morris County residents who love the woods. It's not only an opportunity for new adventures and nature exploration, it's a chance to give back to the forests that nourish us.

For new trails means the need for new stewards. McMillan manages Morris County's Adopt-a-Trail program, a network of volunteers who care for 80 trails in 24 county park areas, such as the 60-mile Patriot's Path. Stewards oversee manageable stretches of trail — clearing litter and downed branches and cutting back invasive species.

In addition to the satisfaction that comes with giving back, stewards will learn some valuable skills, McMillan says, such as how to read blazes, invasive species identification, tool safety and tips to keep safe in the woods.

On March 31, I joined 14 volunteers who fanned out onto a mile stretch of Patriot's Path in East Hanover managed by the township Environmental Commission on a rainy morning. Trash bags in hand, we cleared plastic bottles, snack food bags and broken glass, much of it swept down the Whippany River when its banks swelled after Tropical Storm Irene. Tires, hunks of scrap metal and a car seat were also among the debris cleared.

Even though litter and tires remained after we left, environmental commission chairman Chris Manak considered the cleanup a success. The group cleared 17 bags, or about 68 cubic feet of trash. At past cleanups — on sunny days, when up to 40 people volunteered — there have been as many as 40 bags of trash collected, he said.

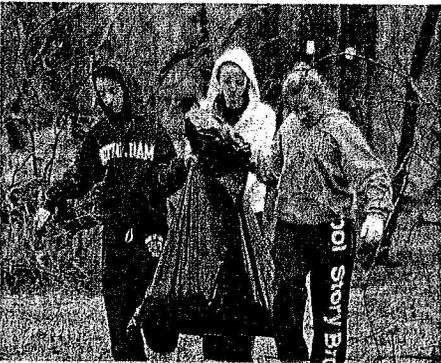

"It's simple being a steward," Manak said. "We come out here to do clean-ups at least three

Volunteers make their way to the Rockaway River at the fourth annual river cleanup on March 24. The event, hosted by Potbelly's Riverside Cafe, drew more than 100 people. KAREN FUCITO/FOR THE DAILY RECORD

Volunteer Elizabeth West guides a tire along Patriot's Path at the East Hanover Commission's Adopt-A Trail cleanup on March 31. KAREN MANCINELLI/FOR THE DAILY RECORD

Volunteers Carly Calderone, Nicole DeRogatis and Ashley French, all 13, carry a bag of trash on Patriot's Path at the March 31 cleanup. KAREN MANCINELLI/FOR THE DAILY RECORD

times a year and issue reports to the county about what we see."

There's something special about people who volunteer their time tending trails. They understand the beauty of their

backyards and see the value of working to keep it clean, even if it seems like a drop in the bucket.

A new steward recently put his desire to give back this way: "He uses the trail and it

wasn't clear to him that it continued on," McMillan said. "He wants to help clear it so it's in better shape, so others can follow it."

Morris County residents looking to volunteer for the two-year post as an Adopt-a-Trail volunteer can register to attend an orientation meeting at 7 p.m. on April 19. Those interested should contact McMillan at 973-326-7604 or jmcmillan@morris-parks.net for more information.

For those looking to give back without the commitment can attend one of these upcoming cleanups:

» The Morristown Clean Communities Committee is holding a town-

wide clean up at 9 a.m. April 21. Volunteers can meet at the Town Hall Parking Lot, 200 South St. for registration and work assignments with light refreshments. Sites include parks, playgrounds, parking lots and roadways. Information: Kathleen O'Neill Margiotta at k-margiotta@townof-morristown.org.

» The Chatham Township Environmental Commission's 10th annual Open Space cleanup will be held 9:30 a.m. to 12:30 p.m. on April 21, at the Green Village Pond Conservation Area, an old homestead trash heap now owned by the township. More information: 973-377-6992.

» The East Hanover

MORRIS COUNTY ADOPT-A-TRAIL PROGRAM

Eligibility: At least one responsible party must be 18 years of age or older. Open to individuals, families, clubs, groups, organizations, etc., able to make at least three working visits per year, with a two-year commitment.

Training: An orientation session providing training in basic skills is given by the Morris County Park Commission.

Basic tasks: Cutting and pruning of brush, picking up litter, painting blazes and cleaning out drainage. Filing reports on trail conditions is required three times a year.

For more information or registration forms, contact Trails Coordinator Janet McMillan at jmcmillan@morris-parks.net or 973-326-7604.

Morris County Park Commission, 53 East Hanover Avenue, Morristown, NJ 07962.

Rotary Club will clean up the banks of the Whippany River at Ridgedale Avenue and Melanle Lane in East Hanover at noon on April 22. This event is sponsored annually by Morris County Clean Communities and the East Hanover Rotary Club. Volunteers should meet at the Department of Public Works building on 8 Melanle Lane. More information: 973-428-8200.

January 27, 2012

National Park Service
Denver Service Center - Planning Division
Attn: Morgan Elmer
12795 W. Alameda Parkway
P.O. Box 25287
Denver, CO 80225-0287

Dear Morgan Elmer:

On behalf of the East Hanover Environmental Commission, and the people of East Hanover, I would like to comment on The Susquehanna-Roseland 500kV Transmission Line:

- (1) East Hanover supports the NO BUILD alternative (Alt. 1) as the "NPS-preferred Alternative."
- (2) This project will impair the scenic and cultural landscapes these park units were created to preserve.
- (3) All action alternatives will result in an **impairment** of Park resources, including but not limited to visual pollution, wildlife and ecosystems destruction, impacts on endangered species, scenic vistas, forests, and visitor experience, and noise pollution from the construction of the stanchions or poles; the mitigation plan does not go far enough to prevent the **impairment** of these Park resources.
- (4) Impairment would not be "temporary." Construction of access roads, staging areas, widening of rights-of-way and the destruction of acres of forests will result in permanent destruction of park resources, especially core forests and landscape connectivity values.
- (5) Additional alternatives need to be examined in the final EIS including non-transmission alternatives, which I have discussed below.
- (6) Demand response programs, energy efficiency and conservation, and renewable local energy generation can obviate the need for this line, and do not require the use of ratepayer money to construct obsolete infrastructure projects. Energy demand in New Jersey has dropped over the past three years in part due to such

programs and this project has not been updated to reflect that change in energy usage.

- (7) The Regional Greenhouse Gas Initiative (RGGI) is the first mandatory, market-based effort in the United States to reduce greenhouse gas emissions. Ten Northeastern and Mid-Atlantic states will cap and then reduce CO2 emissions from the power sector 10% by 2018 (<http://www.rggi.org/home>). Coal fired power plants of Pennsylvania emit high levels of carbon dioxide, a greenhouse gas, which contributes to global warming. Why extend this extension cord from these plants, when the Northeast and Mid-Atlantic needs to reduce these CO2 emissions? What happened to researching and construction of Renewable Sources, i.e., solar and wind turbine farms? We are supposed to be correcting errors of the past, not creating new ones. Instead of investing the millions of dollars on upgrading this conduit from the coal plants of Pennsylvania, why not invest those same dollars in Green Technologies within New Jersey?
- (8) Wind, Solar and biomass are currently available as renewable resources. Wind, found at the shore and in the highlands, have sustained winds of 11 mph. Solar would have distributed generation and supply the grid. Biomass is also being used and includes LFG, wastewater treatment, wood residue, food waste and aggregation of resources.
- (9) Per NJ Clean Energy, as of October 31, 2011, NJ has more than 490 MW of solar, with over 12,000 installs, 31 MW Biomass, 8 MW Wind and 1.5 MW of Fuel Cells. And, as of November 30, 2011, over 12, 896 homes and business have installed a solar electric system.
- (10) Tomorrow, and the future, NJ's Clean Energy Program anticipates more than 4,430 MW solar, more than 1,100 MW Offshore Wind, 200 MW Onshore Wind, and 900 MW Biomass. So you can see the future holds renewable energy instead of old coal fired plants. There is currently a Renewable Energy Incentive Program (REIP) available through NJ Clean Energy. (See: <http://www.njcleanenergy.com/renewable-energy/home/home>)
- (11) This project is goes against the New Jersey Energy Master Plan. Why do we have Master Plans, if they are not going to be used for planning purposes? Towns and state governments spent money on creating and updating these master plans, not with the intention of ignoring them.
- (12) Why is PSE&G planning to string two sets of cables capable of carrying 500kV each? The original plan was for keeping the original 250 kV cable and stringing a new 500 kV line. If you string two cables capable of carrying 500 kV each, that is what they are going to do. They are not going to string a 500 kV cable and only run 250 kV through it. The magnitude of 1000 kV (or even 750 kV) will have its disastrous results (see below).

(13) East Hanover has six (6) recorded cases of brain tumors from residents along the current 250kV line, and numerous other mortal cancers. To increase the kV lines from 250 to an additional 500kV, in the magnitude of 300%, will exponentially increase the incidence of brain tumors and other cancers. Is the "supposed" reliability of electricity (to be discussed later) more important than human lives? Do these towers really need to be erected in such a highly populated area, instead of less populated areas?

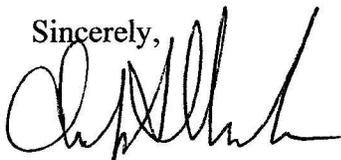

Remember Love Canal. Remember Pacific Gas and Electric Company litigation (PG&E) in 1993. Remember Toms River, NJ and their cancer cluster. We as residents and concerned citizens of East Hanover do not want to get on the map as a cancer cluster and in all the media for something that could have been prevented had thorough research and development been conducted.

(14) To argue that this project will support job creating is putting jobs over environmental and health concerns of the wildlife and ecosystems within the Park, as well as the integrity of the same. The Park will suffer irreparable and permanent damage if this project is allowed to move forward.

(15) Protection of the functions and values provided by upland forests and wetlands in combating flooding, providing habitat to threatened and endangered species, and allowing for groundwater recharge provide a greater public benefit than the Susquehanna-Roseland project.

Thank you for the opportunity to comment on the Susquehanna-Roseland 500 kV Transmission line. The East Hanover Environmental Commission strongly supports the NPS to select the "No Build Alternative" as the "NPS-preferred Alternative" and will continue to work with the Township council's effort opposing this project.

Sincerely,

Christopher Manak

Chairman

East Hanover Environmental Commission

LETTERS TO THE EDITOR

East Hanover Environmental Commission urges park service to disallow power line plan

Editor's note: The following letter was sent to the National Park Service on Jan. 27. A copy was sent to The Hanover Eagle.

EDITOR:

On behalf of the East Hanover Environmental Commission, and the people of East Hanover, I would like to comment on The Susquehanna-Roseland 500 kilovolt (kV) transmission line. East Hanover supports the "no build" alternative as the "NPS-preferred alternative."

This project will impair the scenic and cultural landscapes these park units were created to preserve.

All action alternatives will result in an impairment of park resources, including but not limited to visual pollution, wildlife and ecosystems destruction, impacts on endangered species, scenic vistas, forests, and visitor experience, and noise pollution from the construction of the stanchions or poles; the mitigation plan does not go far enough to prevent the impairment of these Park resources.

Impairment would not be "temporary." Construction of access roads, staging areas,

widening of rights-of-way and the destruction of acres of forests will result in permanent destruction of park resources, especially core forests and landscape connectivity values. Additional alternatives need to be examined in the final EIS, including non-transmission alternatives, which I have discussed below.

Demand response programs, energy efficiency and conservation, and renewable local energy generation can obviate the need for this line, and do not require the use of ratepayer money to construct obsolete infrastructure projects. Energy demand in New Jersey has dropped over the past three years in part due to such programs and this project has not been updated to reflect that change in energy usage.

The Regional Greenhouse Gas Initiative (RGGI) is the first mandatory, market-based effort in the United States to reduce greenhouse gas emissions. Ten Northeastern and Mid-Atlantic states will cap and then reduce CO2 emissions from the power sector 10 percent by 2018.

Coal fired power plants of Pennsylvania emit high levels

of carbon dioxide, a greenhouse gas, which contributes to global warming. Why extend this extension cord from these plants, when the Northeast and Mid-Atlantic needs to reduce these CO2 emissions? What happened to researching and construction of Renewable Sources, i.e., solar and wind turbine farms? We are supposed to be correcting errors of the past, not creating new ones. Instead of investing the millions of dollars on upgrading this conduit from the coal plants of Pennsylvania, why not invest those same dollars in Green Technologies within New Jersey?

Wind, Solar and biomass are currently available as renewable resources. Wind, found at the shore and in the highlands, have sustained winds of 11 mph. Solar would have distributed generation and supply the grid. Biomass is also being used and includes landfill gas wastewater treatment, wood residue, food waste and aggregation of resources.

Per NJ Clean Energy, as of Oct. 31, 2011, New Jersey has more than 490 megawatts of solar, with over 12,000 installs, 31 megawatts Biomass, 8 MW

Wind and 1.5 megawatts of Fuel Cells. And, as of Nov. 30, 2011, over 12, 896 homes and business have installed a solar electric system.

Tomorrow, and the future, NJ's Clean Energy Program anticipates more than 4,430 megawatts solar, more than 1,100 MW Offshore Wind, 200 megawatts Onshore Wind, and 900 megawatts Biomass. So you can see the future holds renewable energy instead of old coal fired plants. There is currently a Renewable Energy Incentive Program (REIP) available through NJ Clean Energy.

This project is goes against the New Jersey Energy Master Plan. Why do we have Master Plans, if they are not going to be used for planning purposes? Towns and state governments spent money on creating and updating these master plans, not with the intention of ignoring them.

Why is PSE&G planning to string two sets of cables capable of carrying 500kV each? The original plan was for keeping the original 250 kV cable and stringing a new 500 kV line. If you string two cables capable of carrying 500 kV each, that is what they are going to do. They

are not going to string a 500 kV cable and only run 250 kV through it. The magnitude of 1000 kV or even 750 kV will have its disastrous results.

East Hanover has six recorded cases of brain tumors from residents along the current 250kV line, and numerous other mortal cancers. To increase the kV lines from 250 to an additional 500kV in the magnitude of 300 percent will exponentially increase the incidence of brain tumors and other cancers. Is the "supposed" reliability of electricity to be discussed later more important than human lives? Do these towers really need to be erected in such a highly populated area, instead of less populated areas?

Remember Love Canal. Remember Pacific Gas and Electric Company (PG&E) litigation in 1993. Remember Toms River and their cancer cluster. We as residents and concerned citizens of East Hanover do not want to get on the map as a cancer cluster and in all the media for something that could have been prevented had thorough research and development been conducted.

To argue that this project will

Thank you for the opportunity to comment on the Susquehanna-Roseland 500 kV Transmission line. The East Hanover Environmental Commission strongly supports the NPS to select the "No Build Alternative" as the "NPS-preferred Alternative" and will continue to work with the Township council's effort opposing this project.
